(April-2025)

Declaration

(To be attached with the synopsis by the candidate forwarded by their respective supervisor)

1. I understand plagiarism and am aware of the UGC/University's plagiarism policy.
2. I declare that this synopsis is my original work. Where other people's work has been used (either from a printed source, Internet, or any other source), this has been properly acknowledged and referenced, and given due credit.
3. This work has not been previously produced/submitted for consideration by another candidate for the award of the M.Ed. degree by any other person to any other institution.
4. I declare that the similarity percentage of this synopsis is not more than 20%, in any case of discrepancy the research work may be canceled at any step.

1.0 INTRODUCTION

Education is the backbone of human development. Without it, neither the complete development of the individual, nor of society nor of civilization is possible. It is because of education that man has been able to conquer nature, step into space and is building a global community. Education is not only a means of acquiring knowledge but it is also the foundation stone of the development of society, culture, science, technology and values. Education has laid of foundation of modern inventions, industrial revolution and digital age. The technology developed by education has made education even more accessible, due to which education has become flexible and global. Due to electronic resource, education is not limited o the classroom but has become accessible to everyone through mobile and internet.

In the current era, information and communication technology (ICT) assumes an essential role in the advancement of education, and to help improve the quality of services.

Made with  Napkin

To provide efficient services to information seekers, electronic resources (e-resources) are considered as an integral part. An information source that provides information (numerical,

textual, graphical, pictorial) in an electronic format is known as an electronic resource. The term e-resources are used in a broader sense which may include a number of publishing models, including online databases, electronic journals, electronic books, OPACs, CD-ROMs, print on demand (POD), emails, internet resources, wireless publishing, web publishing and electronic links (Muhammad, Y., & Dilshad, M.A. 2021).

The appearance of e-resources is a rising advancement of this age, which is profoundly influencing the scholastic and academic community. The use of e-resources has been enhanced tremendously. Education has been an important part of the development of human civilization since ancient times. It is because of education that man has been continuously progressing on the path of development. In the present times, technology has become an important part of human life which has affected every aspect of human resources. The field of education is also not untouched by this.

In the present times, technology has completely changed the form of education and has replaced traditional learning resources with e-resources. Consequently, the academic community has undergone tremendous changes during these years, assuming new dimensions influenced by technology-driven applications (Shanmugam, T. 2012). The term e-resources stand for electronic resources which are also known as online information database. Many of the items that a library provides via a computer network are referred to as e-resources (Prajapati, S., Kisku, U., & Dubey, M.K. 2022).

E-resources includes online libraries, digital libraries, online databases, e-journals, videos, online news-paper, online public access and other computer based electronic networks. E-resources are those resources which include documents in electronic or e-format that can be accessed via Internet in digital library environment (Rani, S., & Chinnasamy, K. 2014).

After the time of COVID-19, it seems as if there has been a new revolution in e-resources which has affected every level of education. Learner from lower to higher levels of education have now become familiar with it. Due to closure the universities to prevent the spread of the COVID-19 virus, e-resources became the main means of transferring knowledge and understanding of ideas and values to students E-resources provide much more positive factors which make positive impact on cost effectiveness for the students (Ranaweera, H.M.P.V. 2021). And in present times, they are expanding due to the prevalence of e-resources and their easy access to learners.

have turned out to be dependent on e-resources and embraced these resources as the basic information resources in their academic and research activities (Amjad, 2013). the scholars and researchers have changed with the advancement of electronic environment as they prefer e-resources for their research and information-seeking (Olle, 2010). Electronic resources are invaluable research tools that complement the print-based resources in a traditional library.

When there is so much dependence on e-resource, it is important to know how much that resource is meeting the expectations of the people. To what extent is it able to fulfill their needs, due to which the concept of satisfaction towards e-resources was born.

Because satisfaction is actually an indicator of a person's attitude towards that resource or work and the fulfilment of his needs. Although a lot of research work has been done in this field till now, however, keeping in mind the needs of the current circumstances, this study has been selected so that by understanding the demands of the learners in the present time, a favorable educational environment of e-resources can be created for them, in which they can get more benefits according to their needs and progress in their educational achievements and research work.

1.1 NEED, SIGNIFICANCE AND JUSTIFICATION OF THE STUDY

At present, the use of e-resources as research work and study material is an important basis of academic movement. Due to effective presentation with multimedia tools, e-resources have become a major source of information explosion, more and more publications are becoming web-related in the present era. The environment is rapidly changing into electronic (Shanmugan, T. 2012). where it aims to create an interactive learning environment which is based on computers and internet (Majid, I., & Lakshmi, V. 2023).

The benefits derived by the availability of e-resources and provision of online information services are increasingly changing the way people access and use information in libraries (Chukwueke, C. 2019). The use of e-resources for research is an important basis for academic movement. The e-resources are accessible on the Internet and on stand-alone systems at the E-library (Alagu, A., & Thanuskodi, S. 2018).

With the increasing dependency of learners on e-resources, it becomes necessary to know whether the e-resources are meeting their requirements or not for which, it is important to know their satisfaction level. This will promote innovation and training among learners and contribute meaningfully to their learning and research outcomes. This survey will provide valuable information about the e-resources and technology effectiveness.

Impact of E-Resource Satisfaction

1.2 RATIONALE OF THE STUDY

At present, e-resources have become an important part of the teaching process, Attitudes towards use of e-resources is the main predictor on students' satisfaction on e-resources, effective guidance for increasing the students' satisfaction to use e-resources to enhance students' academic performance effectively ([Ranaweera, H.M.B.P. 2021](#)). Even then Orientation programs should be organized to make the users do aware of how to use e-resources and get benefits out of them ([Kaur, B., & Saini, M. 2019](#)). And to prevent the difficulties faced by the faculty members, the network connectivity must be improved ([Meeramani, N. 2023](#)). Libraries should organize more awareness program on the availability of Open Access e-resource and encourage students to use them ([Onobrakpor, U.D. 2022](#)). However, these studies have not paid attention to the social environment of students, so the purpose of conducting an e-resource satisfaction survey is to collect feedback from learners about their experiences, challenges, and satisfaction in order to evaluate the usefulness of e-resources and identify areas for improvement. So that e-resources can better contribute to academic success and represent a valuable investment.

In addition, this study necessary to confirm students' use and responses of e-resources and to remove ambiguities.

1.3 STATEMENT OF THE PROBLEM

In the digital age, academic institution provides a wide range of e-resources such as e-books, online journals, academic databases, and digital libraries to support the learning and research needs of postgraduate students. However, despite the availability of these resources, the level of satisfaction among post graduate students varies. Many students encounter challenges related to ease of use, limited accessibility, relevance of content and lack of technical support.

Furthermore, insufficient awareness and training often hinder the effective utilization of these resources. This study aims to access the extent of postgraduate students' satisfaction with e-resources, identify the key factors influencing their satisfaction, and determine areas that require improvement to enhance their academic experience and the overall effectiveness of e-resource usage.

A Study of E-resource Satisfaction Among Post-Graduate Level Students Studying in Chhatrapati Shahu Ji Maharaj University, Kanpur

1.4 OBJECTIVES

1. To construct the tool on e-resource satisfaction.
2. To compare the level of e-resource satisfaction among post graduate level students.
 - 2.1 To compare the mean scores of e-resource satisfaction among male and female students.
 - 2.2 To compare the mean scores of e-resource satisfaction among teacher education and science stream students.
 - 2.3 To compare the mean scores of e-resource satisfaction among urban and rural students.

1.5 HYPOTHESES

H_01 - There is no significant difference between the mean scores of e-resource satisfaction among male and female students.

H_02 - There is no significant difference between the mean scores of e-resource satisfaction among teacher education and science stream students.

H_03 - There is no significant difference between the mean scores of e-resource satisfaction among urban and rural students.

1.6 OPERATIONAL DEFINITION OF THE KEY TERMS

E-resource- In this study, e-resource means resources available in the form of multimedia content, e-books, e-journals, digital libraries, e-magazines, website, learning database, used by the PG students for academic research or information purpose.

Satisfaction- In this study, satisfaction means the extent to which the e-resources meet their expectations and needs as per the responses given by sample on a standardized scale.

1.7 DELIMITATION OF THE STUDY

- 1) The sample of the study is limited to, postgraduate students of CSJMU Kanpur.
- 2) In this study, only the M.Ed. students from Teacher education and M.Sc. Bio-tech students from life science department will be select.

2.0 REVIEW OF RELATED LITERATURE

E-resources (online databases, electronic journals, electronic books, OPACs, CD-ROMs, print on demand (POD), emails, internet resources, wireless publishing, web publishing and electronic links) in higher education have become an essential tool for research advancement. As institutions increase their investment in digital libraries, it has become necessary to evaluate users' satisfaction to ensure effective use of e-resources. This study focused on understanding users' satisfaction of postgraduate students regarding e-resources.

The study of review of related literature includes national and international researches.

NATIONAL STATUS

Meenamani, N., (2023) conducted the study on "A Study on E-Resources Awareness and Use by the Faculty Members of Jain University, India" the objectives of which was, to study the awareness, intention to use e-resources and satisfaction with the use of e-resources. The researcher collect data through questionnaire and presented the data with the help of MS Word and Excel. As a result, it was found that the faculty members are satisfied with the available e-resources, but poor networking needs improvement.

Kumar, V., Mehta, V., Garg, R. & Zia, A., (2022) conducted the study on "Analyzing the Impact of Value Satisfaction on Behavioral Intention to Use E-Resources" The objective of this study was to examine the influence of perceived value Utilitarian, Hedonic, Uniqueness, Epistemic and Economic metrics in inducing satisfaction and behavioral intention among e-resource users. In this study descriptive survey method was used and simple random sampling was use to collect the data. The result was found that utilitarian, hedonic, uniqueness and epistemic metrics have significant influence on satisfaction and behavioral intention to use e-

resources and economic perceived value has insignificant influence on satisfaction and behavioral intention to use e-resource.

Saini, M., & Kaur, B., (2019) examined the “Usage and satisfaction with e-resources in DAV College libraries in Haryana” The objectives of this study, to find out the usage of e-resources and satisfaction of users. To achieve the objectives, questionnaire-based survey research method was used. And the data obtained was analyzed through Chi-Square. As a result, it was found that users are satisfied with the available e-resources, but orientation programs should be conducted to make them aware about the ways to use to e-resources and get benefits from them.

Alagu, A., & Shanmugam, T., (2018) carried the study on “Users perception of electronic information resources: A case study of Alagappa College of Arts and Science, Tamil Nadu, India” The objectives of this study, to find out the level of awareness about e-resources, main reason and purpose of use and level of satisfaction with information sources, for which the researcher used survey method and collected data through questionnaire. In conclusion, it was found that the users had low awareness about e-resources and their level of satisfaction was medium.

INTERNATIONAL STATUS

Onobrakpor, U.D., (2022) conducted the survey research “Extent of Utilization and Satisfaction of Open-Access Electronic Resources by Postgraduate Students of Federal Universities in South, South Nigeria” The objectives of this study, to examine the use of open-access e-resources by student of a federal university of Nigeria and to determine the level of satisfaction student get from their use. For this, the researcher used a descriptive survey design and used questionnaire for data collection. As a population, 349 out of 1401 Ph.D. and M.Ed. students of the university were selected as a sample. After the study, it was found that M.Ed. students use open-access e-resources more than Ph.D. students and their level of satisfaction was also found to be higher.

Ranaweera, H.M.P.V., (2021) conducted a study on “Studies’ Satisfaction towards the use of e-resources available in selected Sri Lankan Universities during COVID-19 pandemic” The objectives of this study, to find out the factors influencing students’ satisfaction on the use of e-resources available in a selected state university in Sri Lanka. The research model used in this study was developed based on the observations and evidence obtained from the literature review. It adopted a deductive approach and took students’ satisfaction as the dependent variable and internet experience and skills, ease of use, usefulness, attitude towards e-resource as independent variable. The study used pilot survey method and the researcher used self-administered questionnaire to collect data. The findings revealed that attitude towards the use of e-resources in the main predictor of students’ satisfaction on e-resource.

Younus, M., & Dilshad, M.A., (2021) studied the “Assessing Users’ Satisfaction with Electronic Resource in University Libraries in Punjab, Pakistan” The objective of this study was to identify the electronic resource available in a university in Punjab, Pakistan and to assess users’ satisfaction with the electronic resource. The researcher used quantitative research methodology to achieve the objectives of the study. Data was collected through the

questionnaire from the selected samples. The findings of this study revealed that there was lack of adequate electronic resources in the university libraries. Users were satisfied only with internet resources.

Nnadozie, C.O., Uiebo, M.U., & Chukwueke, C., (2019) conducted the survey research “Availability of e-resources and accessibility of e-services in academic and special libraries in Abia State, Nigeria” The objectives of this study, to find out the accessibility of e-resources, intention to use, and challenges in accessing services by users in MOAU and NRCRE libraries. To achieve the objectives of the study, the researcher used descriptive survey method and data was collected through questionnaire. The findings revealed that availability of e-services was low, frequency of use was very low and various factors hindering access to service were identified.

Sritharan, T., (2018) explored “Evaluation of usage and users’ satisfaction on electronic information resources and services: A study at postgraduate institute of medicine library, University of Colombo” The objectives of the study, to identify the purpose of using e-resources available in the library, determine the level of users’ satisfaction with the use of the services, identify the major issues and concerns of usage. To achieve the objectives, the researcher used survey method and collected data through self-administrated questionnaire. After data analysis, the findings found that lack of time, lack of training, unavailability of remote access to subscribed resources were then main reasons for accessing e-journals in the library.

A review of related literature reveals that there have been many studies on e-resource satisfaction. Their use is rapidly increasing in higher education institutions. Most studies show that e-resources provide quick access, variety of information and time saving to her users, which increase the level of satisfaction. However, some studies have highlighted technical problems, network inconvenience, lack of users training and complexity of user’s interface as factors for lack of satisfaction.

2.1 RESEARCH GAP

Although many studies underscore the usefulness and effectiveness of e-resources, there is still a lack of a holistic understanding of all factors influencing users’ satisfaction, particularly across different post graduate courses and students’ backgrounds. This study aims to fill this research gap.

- 1- This study, address the level of satisfaction with e-resources among students of different post graduate courses and their social backgrounds.
- 2- this study explores the patterns of e-resource usage by postgraduate students.
- 3- This study provide insight into various challenges associated with access, retrieval and use e-resources and online information service.

Research Study on E-Resource Satisfaction

Made with Napkin

3.0 METHEDODOLOGY

3.1 APPROACH OF RESEARCH

Quantitative research approach will be used in this study. Because the data obtained from this study will be numerical in nature.

3.2 TYPE OF RESEARCH

In this study Descriptive research will be used. Because this study attempts to describe and explain what exist in presence.

3.3 METHOD OF THE STUDY

In this present study, survey method will be used. Because knowing the student's opinion on a e-resource satisfaction.

3.4 POPULATION

The population of this study, is all postgraduate students studying in Chhatrapati Shahu Ji Maharaj University, Kanpur UP.

3.5 SAMPLE AND SAMPLING PROCEDURE

In this study, 200 students will be selected as a sample, using random sampling technique which includes 100 male and 100 female students.

3.6 TOOLS FOR DATA COLLECTION

In this study, self-constructed and standardized questionnaire will be used for collecting data from the sample.

3.7 TREATMENT OF DATA

In this study, quantitative data will be collected and various statistical techniques used to analyze the data. In which Mean, Standard Deviation, and t-test will be used to interpret and analyze the data obtained.
