PHILOSOPHIZING RESEARCH

Understanding the Philosophical Foundations of Research
शोध के दार्शनिक आधारों को समझना

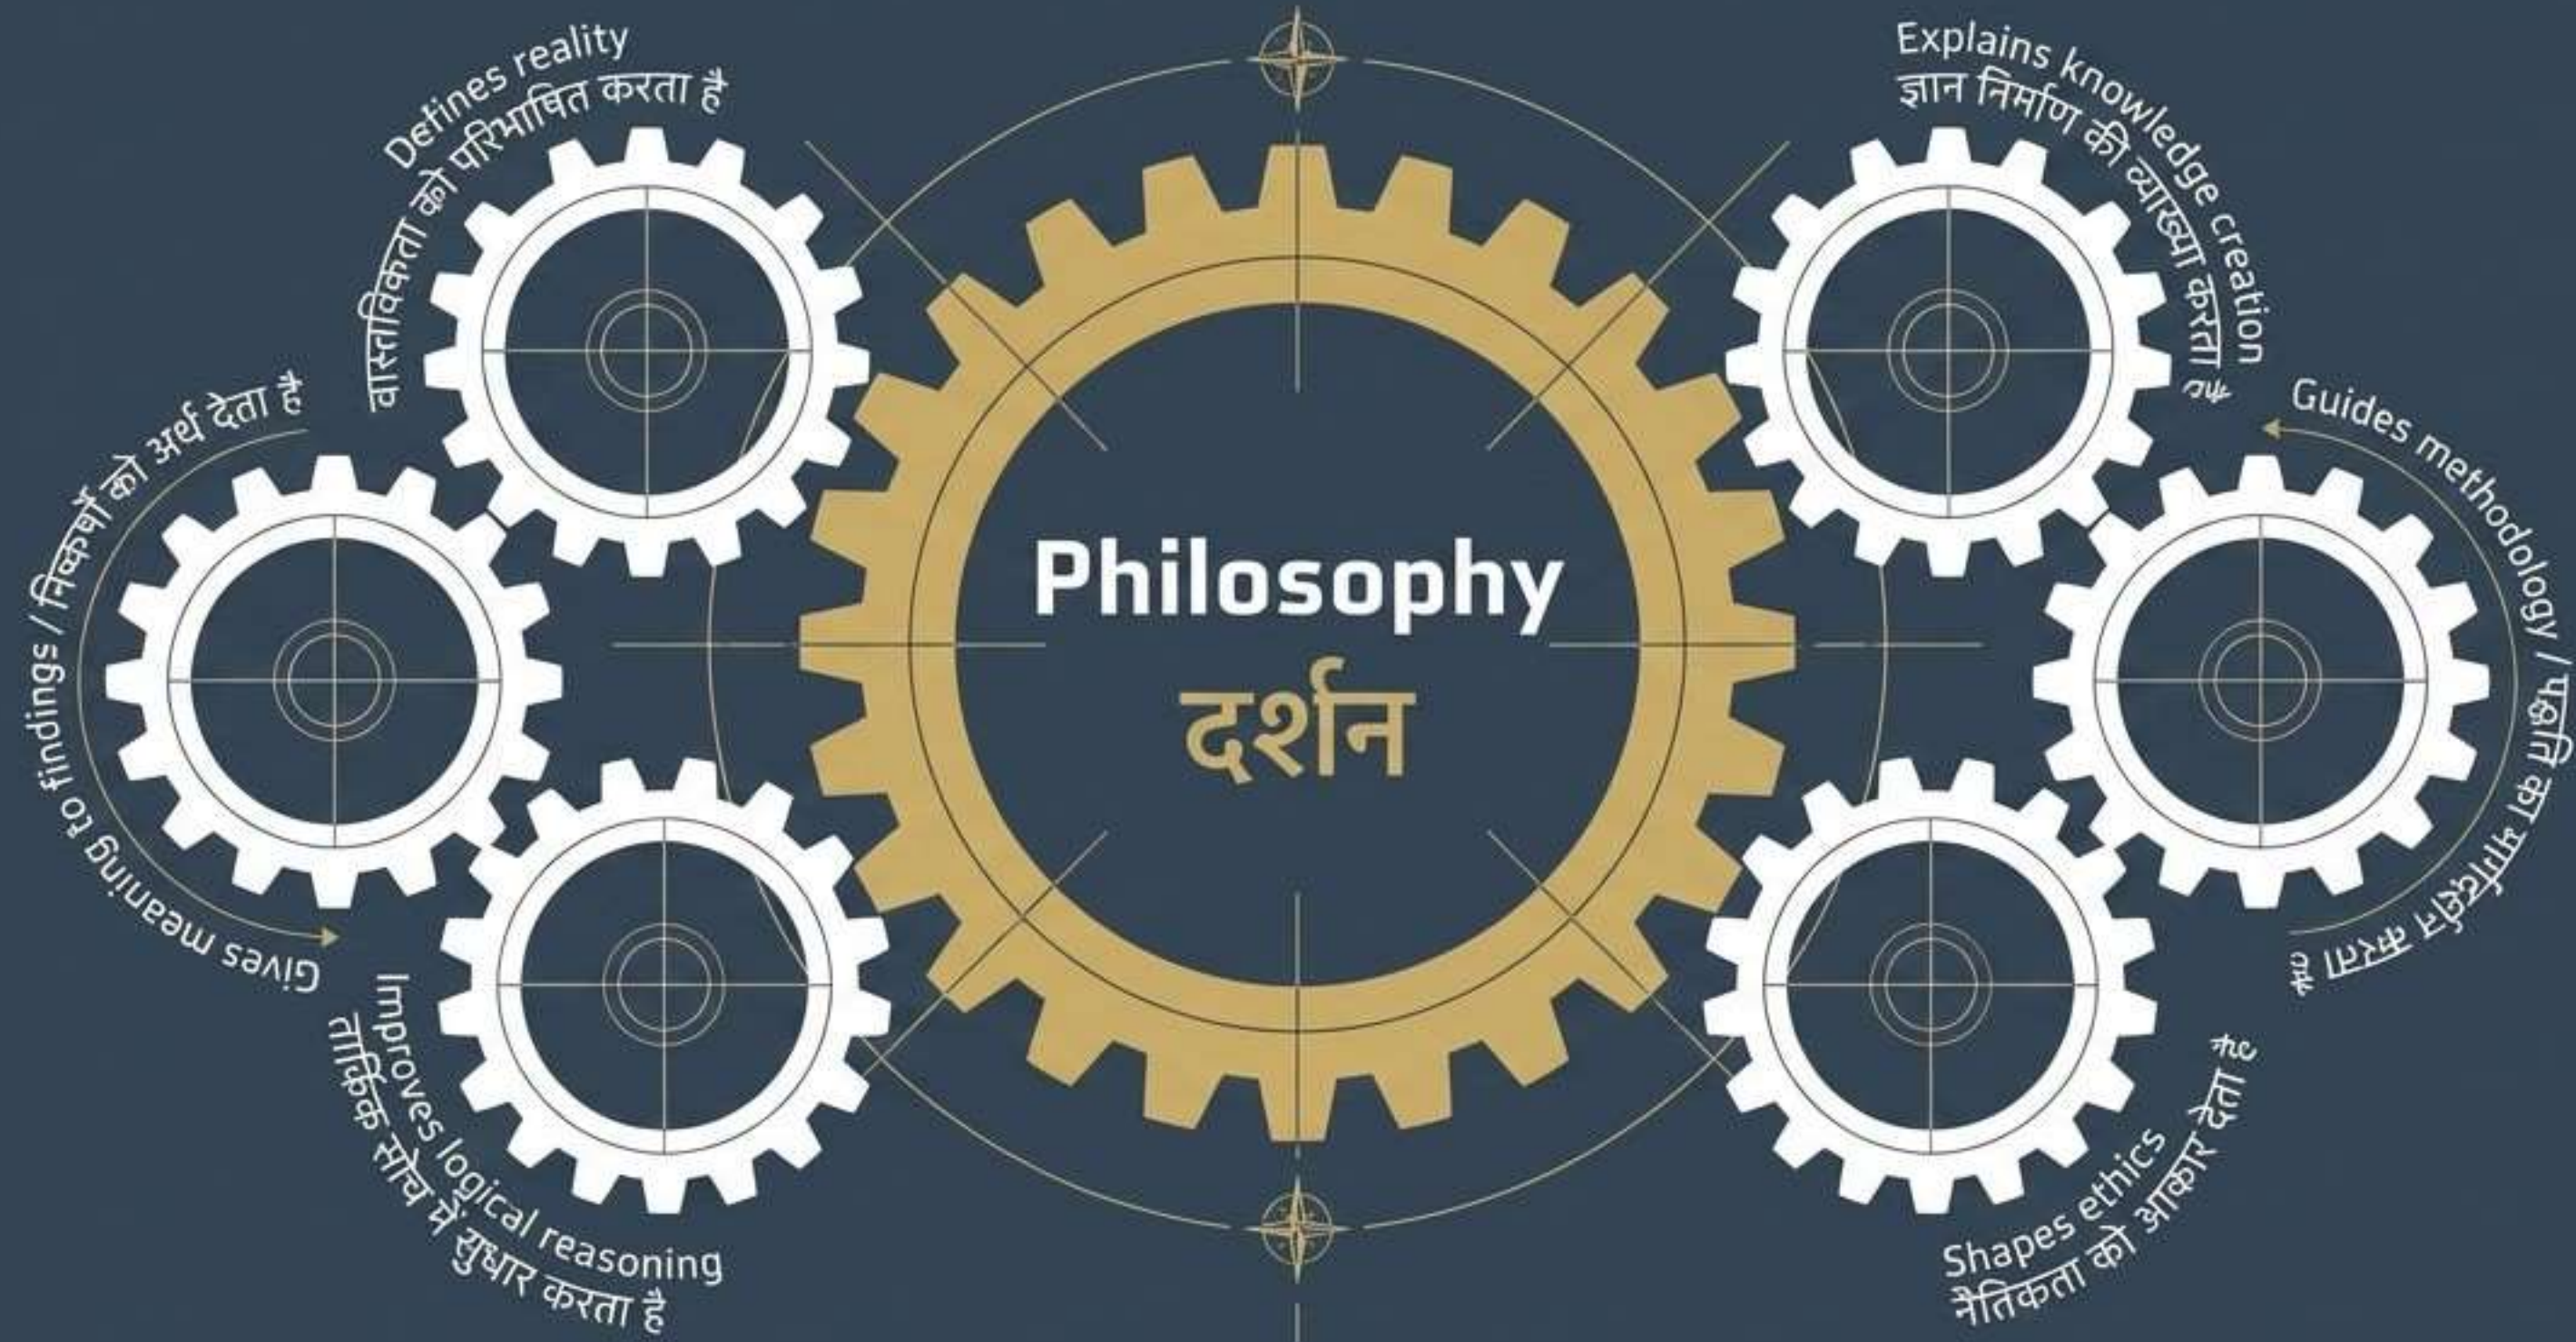

Prepared by Dr. Vimal Singh
Assistant Professor, Department of
Education, CSJM University, Kanpur.

Every researcher requires a reliable compass to navigate the unknown.

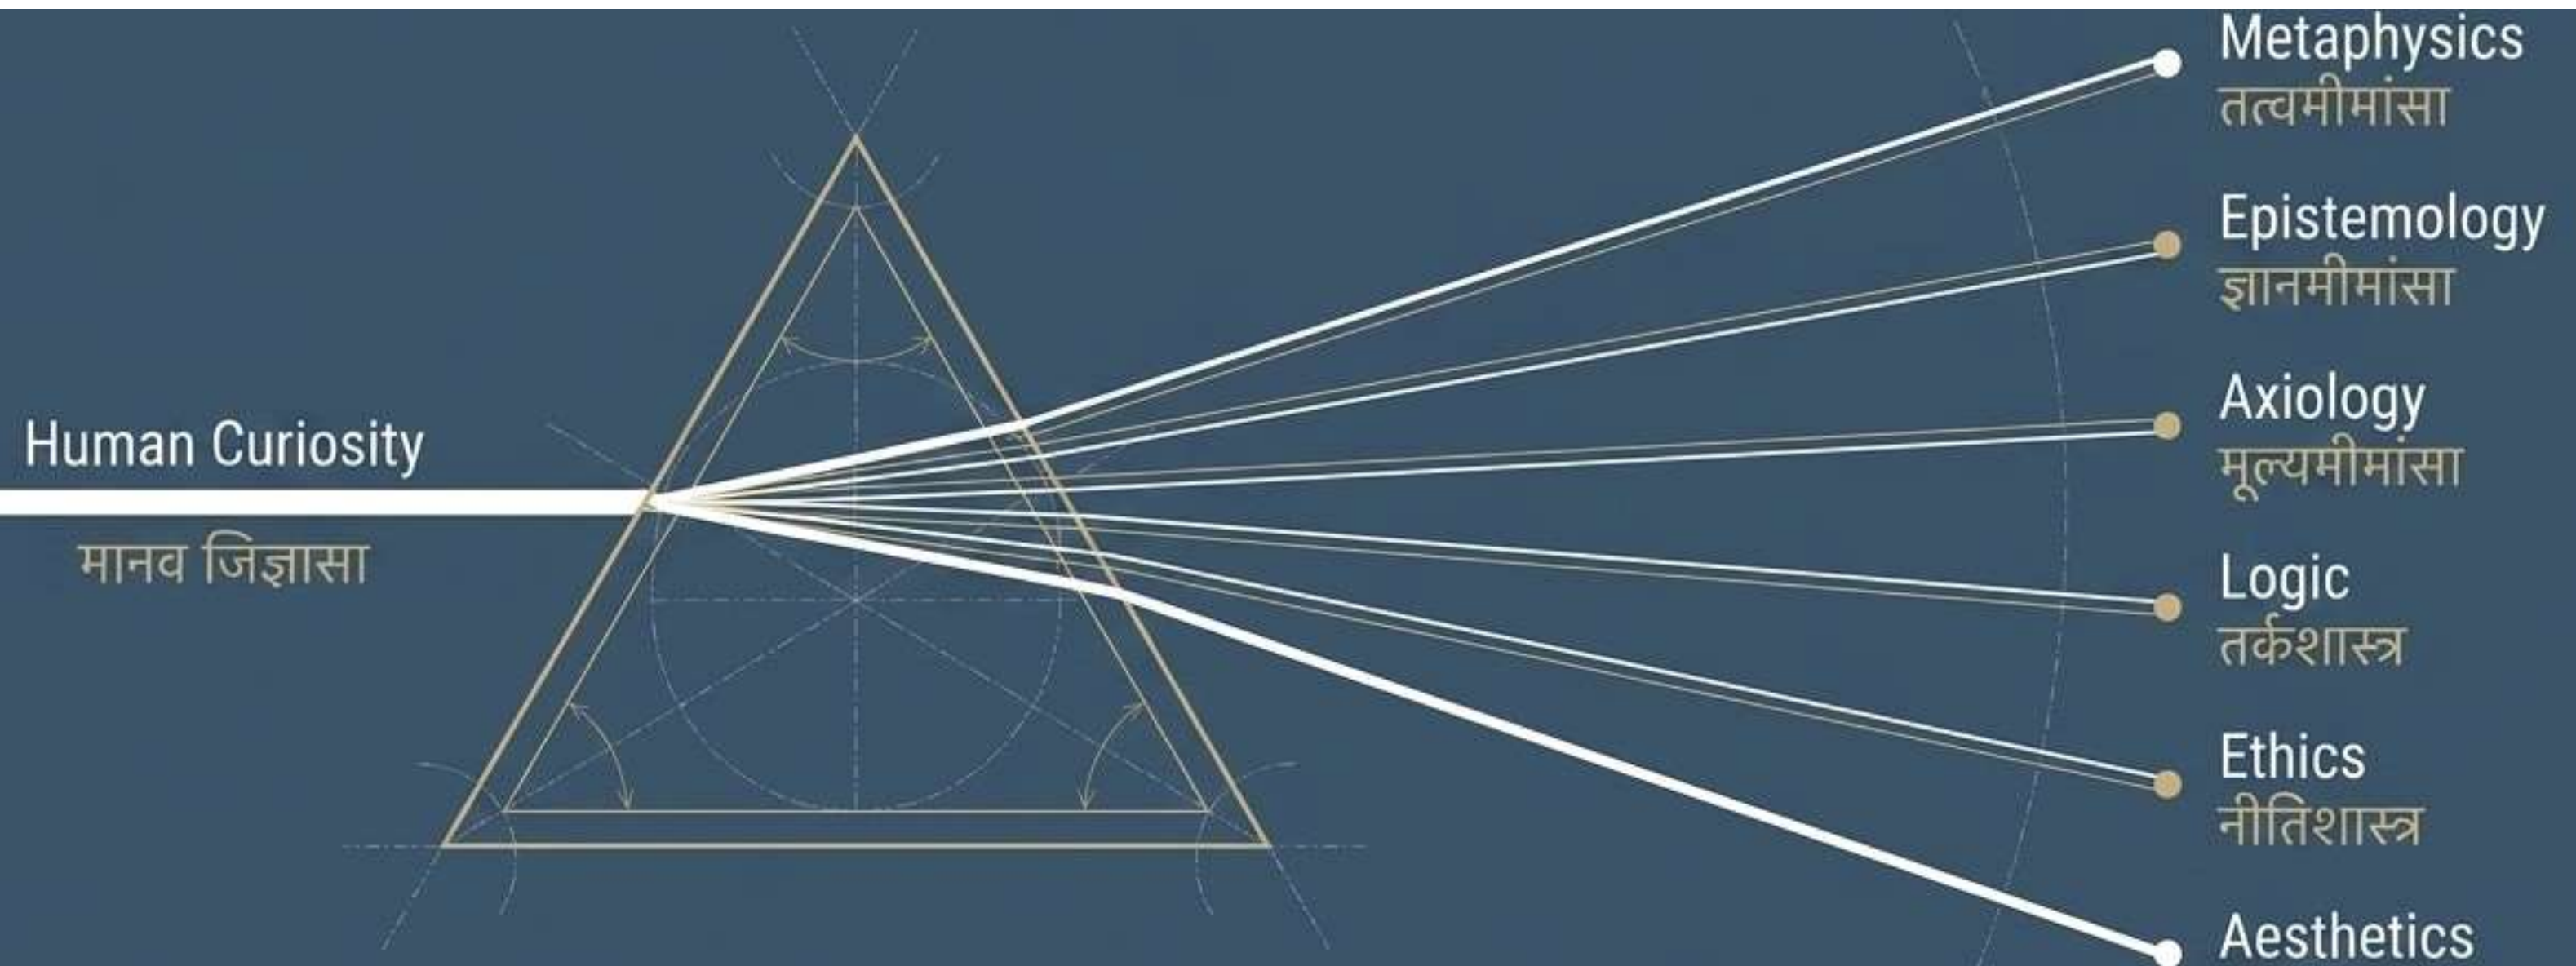

Philosophy is the love of wisdom (6). It provides the essential coordinates to understand reality [],
knowledge [W] values [f] reasoning [N] and human existence [s h h].

Philosophy functions as the central engine driving all research mechanics.

Human curiosity refracts into distinct branches of systematic inquiry.

Mapping the coordinates of reality and the mechanics of knowledge.

Metaphysics (तत्त्वमीमांसा)

The study of existence and the fundamental nature of reality. It asks: What is real? What is the nature of the world we are researching?

अस्तित्व और वास्तविकता की मौलिक प्रकृति का अध्ययन। यह पूछता है: वास्तविक क्या है?

Epistemology (ज्ञानमीमांसा)

The study of knowledge creation. It asks: How do we know what we know? What constitutes valid research?

ज्ञान निर्माण का अध्ययन। यह पूछता है: हम कैसे जानते हैं कि हम क्या जानते हैं?

Balancing rigorous logic with human values and ethical responsibility.

The framework of valid reasoning. It ensures our research arguments are structurally sound and free from fallacy.

वैध तर्क का ढांचा, जो यह सुनिश्चित करता है कि हमारे शोध तर्क दोषमुक्त हैं।

The study of values, branching into two critical navigational markers:

मूल्यों का अध्ययन, जो दो महत्वपूर्ण दिशा-सूचकों में विभाजित होता है:

- ④ **Ethics** (नीतिशास्त्र): Guiding moral conduct in research and protecting human subjects. / शोध में नैतिक आचरण का मार्गदर्शन।
- ④ **Aesthetics** (सौंदर्यशास्त्र): Evaluating the form, beauty, and expression of ideas. / विचारों के रूप और अभिव्यक्ति का

Selecting your map: The four dominant paradigms of research inquiry.

Paradigm (प्रतिमान)

Positivism (प्रत्यक्षवाद)

Objective reality exists. /
वस्तुनिष्ठ वास्तविकता मौजूद है।

Discover universal laws.
सार्वभौमिक नियमों की खोज।

Interpretivism (व्याख्यात्मकवाद)

Reality is socially constructed. /
वास्तविकता सामाजिक रूप से निर्मित है।

Understand deeper meaning.
गहरा अर्थ समझें।

Pragmatism (व्यवहारवाद)

Reality is what practically works. /
वास्तविकता वह है जो व्यावहारिक रूप से काम करती है।

Solve real-world problems.
वास्तविक दुनिया की समस्याओं का समाधान।

Critical Theory (आलोचनात्मक सिद्धांत)

Reality is shaped by power dynamics. /
वास्तविकता शक्ति गतिशीलता द्वारा आकार लेती है।

Challenge systems and emancipate.
प्रणालियों को चुनौती दें और मुक्ति दें।

Core Belief (मूल विश्वास)

Research Goal (शोध का लक्ष्य)

Philosophical alignment creates the tracks upon which methodology runs.

Reality
(Metaphysics)
Defines what is out
there to be studied.

^
(Epistemology & Paradigm)
Determines the lens and
rules for observing that reality.

Action
(Methodology & Process)
Dictates the exact steps
taken to collect and analyze data.

A mismatch between these three waypoints leads to structural failure in research.

Charting the practical course of your research expedition.

1. Problem
समस्या

2. Questions
प्रश्न

3. Design
रूपरेखा

4. Data Collection
डेटा संग्रह

5. Analysis
विश्लेषण

6. Interpretation
व्याख्या

7. Knowledge Creation
ज्ञान निर्माण

The ultimate destination is meaningful knowledge, properly oriented.

Philosophy

Paradigm

Process

True knowledge creation occurs only when the compass of philosophy, the map of the paradigm, and the path of methodology converge at a single point.
