Abstract: This paper presents an empirical exploration of how Rabindranath Tagore's educational philosophy manifests in the value preferences of students at Patha Bhavan, Santiniketan, an institution founded on his pedagogical ideals. Using a self-developed Value Survey comprising 18 values derived from Tagore's teachings, data were collected from 50 secondary and higher secondary students. Quantitative analysis through frequency distribution, median calculation, and rank ordering revealed a distinct value hierarchy. Humanity emerged as the most internalised value, followed by Confidence and Freedom. In contrast, Innovativeness was identified as the least prioritised. The findings demonstrate a strong alignment between Tagore's humanistic, freedom-centric vision and the value orientation of the students, validating the role of an ideologically grounded educational environment in shaping ethical and conscious individuals. However, the lower ranking of values such as Innovativeness, Inquisitiveness, and Scientific Temper suggests areas for pedagogical refinement to fully realise Tagore's integrated and creative vision of education. This study contributes to the discourse on value-based education by providing a methodological framework for assessing the congruence between educational philosophy and student value internalisation.

Keywords: Rabindranath Tagore, Value Education, Educational Philosophy, Student Values, Patha Bhavan, Santiniketan

1 | INTRODUCTION

In an era increasingly dominated by standardised testing, employability metrics, and utilitarian outcomes, the educational vision of Rabindranath Tagore (1861-1941) offers a profound and holistic alternative. Tagore conceptualised education not as a mechanical process of information transfer, but as a creative, liberating, and life-affirming journey that harmonises the individual with nature, society, and the wider cosmos (Marsh, 2013). His philosophy placed supreme emphasis on values such

Access Online

as **freedom, creativity, humanity, internationalism, and aesthetic sensitivity** (Quader, 2015). For Tagore, true education was inseparable from the cultivation of character, empathy, and a deep, joyous engagement with the world.

Despite the rich theoretical scholarship on Tagore's educational thought, a significant gap exists in empirical research. There is a scarcity of studies that investigate how students in institutions explicitly built upon Tagorean ideals actually internalise and prioritise these values (Kumar, 2015). While much has been written about what Tagore's education *should* achieve, less is known about the tangible reflection of his philosophy in the lived value systems of learners. This study seeks to address this gap by moving from theoretical exposition to grounded, data-driven inquiry (Kabir, 2020).

The setting for this investigation is **Patha Bhavan** in Santiniketan, West Bengal. Established as an integral part of Visva-Bharati University, which was founded by Tagore himself, Patha Bhavan embodies his educational experiment (Aronson, 1961). Its ethos such as emphasising freedom in learning, closeness to nature, artistic expression, and a universal humanistic outlook, provides an ideal context to examine the translation of philosophical ideals into student consciousness (Ghosh et al., 2010).

The significance of this research is multi-layered. First, it provides empirical evidence on value internalisation within a unique, philosophy-driven schooling system. Second, it contributes to the broader field of value education by demonstrating a replicable method for assessing the alignment between institutional mission and student outcomes (Singh, 2017). Third, in the context of global educational debates, it reaffirms the relevance of Tagore's indigenous yet universal vision as an antidote to narrow, instrumental models of learning (Debbarma, 2015). Finally, it offers actionable insights for educators and policymakers seeking to design learning environments that nurture not only intellectual skills but also ethical, creative, and globally conscious citizens.

The objectives of this empirical study are:

1. To identify the hierarchy of values reflected among students of Patha Bhavan, Santiniketan, based on the core tenets of Rabindranath Tagore's educational philosophy.
2. To analyse the degree of alignment or divergence between the students' expressed value preferences and the normative framework of Tagore's vision.
3. To enhance understanding of how an institutional culture, steeped in a specific educational ideology, interacts with and shapes adolescent value formation.

By undertaking this analysis, this paper aims to assess the specific case of Patha Bhavan and, in doing so, contribute to the enduring quest for an education that liberates the mind, enriches the spirit, and prepares individuals to contribute to a more compassionate and harmonious world, a quest that lay at the very heart of Tagore's life and work.

2 | METHODOLOGY

A purposive sample of **50 students** was selected from **Patha Bhavan, Santiniketan**. The participants were drawn from secondary and higher secondary levels, representing key adolescent stages where value orientation is both formative and subject to introspection. All respondents belong to an institution explicitly founded on Rabindranath Tagore's pedagogical ideals, making them a pertinent cohort for studying the internalisation of a value-based education inspired by his philosophy. Participation was voluntary, with informed consent obtained from the school authorities, students, and their guardians.

The primary research instrument was a **self-administered Value Survey** developed by the researcher. This survey was designed to operationalise and quantify the core educational values emphasised in Tagore's philosophy. It consisted of **18 values**, systematically derived from his extensive writings, lectures, and the practised ethos of Santiniketan.

The data collection was conducted in a controlled, familiar classroom setting to ensure consistency and minimise external influence. Participants were briefed about the study's objective in neutral, non-directive terms to avoid priming or suggesting desired responses. They were assured of the confidentiality and academic use of their data. No time limit was imposed, allowing for thoughtful reflection and ranking.

The ranked data were subjected to quantitative analysis using the following statistical procedures:

- **Frequency Distribution across Class Intervals:** The ranks (1 to 18) assigned to each value were grouped into predefined intervals (1–3, 4–6, 7–9, 10–12, 13–15, 16–18) to visualise distribution patterns and identify clustering in student preferences.
- **Median Calculation for Central Tendency:** The median rank was computed for each of the 18 values. The median was chosen over the mean due to its robustness with ordinal data and its resistance to distortion by outlier rankings.
- **Rank Ordering based on Median Values:** The values were then arranged in ascending order based on their computed median ranks. This produced a consolidated hierarchy of values as reflected in the student sample, enabling a clear comparison with the emphasis in Tagore's philosophical framework.

All analyses employed descriptive statistics, with results presented in tabular and graphical formats to facilitate interpretation and discussion.

3 | RESULTS

3.1 Frequency Distribution of Value Rankings

The analysis of student rankings from Patha Bhavan reveals distinct patterns in value prioritisation, offering a granular view of how Tagore's educational ideals are reflected in the student psyche. The frequency distribution of the 18 values across six rank intervals (01–03 to 16–18) is presented in Table 1.

A preliminary examination of the frequency table indicates **pronounced clustering** for several core values, alongside a clear dispersion for others, highlighting the students' collective value orientation.

The most striking observation is the overwhelming endorsement of **Humanity**. A remarkable 38 out of 50 students (76%) ranked this value within the top three positions (01–03 interval). This dense clustering at the highest end of the scale signifies its deep and widespread internalisation as a fundamental virtue. Similarly, **Freedom** demonstrates strong top-tier prioritisation, with 20 students (40%) placing it in the 01–03 interval, reinforcing Tagore's central tenet of liberation in learning. **Confidence** (17 students) and **Truthfulness** (16 students) also show significant clustering in the highest rank bracket, indicating their perceived importance within the student community.

Conversely, a set of values shows significant clustering in the lower rank intervals, suggesting their relative deprioritisation. **Scientific Temper** is notably relegated, with 22 students (44%) assigning it the lowest ranks (16–18 interval). **Inquisitiveness** and **Leadership** follow a similar pattern, with 17 and 19 students, respectively, placing them in the bottom interval. This distribution suggests that values associated with rigorous scientific inquiry, persistent curiosity, and conventional leadership are not central to the students' current value hierarchy.

Several values exhibit a **more balanced, mid-range distribution**, indicating moderate or context-dependent importance. **Creativeness**, **Courage**, **Integrity**, and **Patriotism** display frequencies spread across multiple intervals. For instance, while **Creativeness** has 14 students in the 04–06 interval, it also has 16 in 07–09 and only 3 in the lowest bracket. This pattern suggests these values are acknowledged but do not command the same paramount status as Humanity or Freedom.

Values such as **Internationalism** and **Fraternity** present a **polarized** or **complex profile**. **Internationalism** has a notable spread, with 19 students ranking it in the 13-15 interval (moderately low) and only 2 in the top bracket. This may reflect an abstract appreciation rather than a deeply felt guiding principle. **Fraternity** shows a concentration in the middle intervals (07-12), suggesting it is recognised as important but not as a top priority.

This frequency distribution provides the foundational empirical data from which measures of central tendency can be derived. The clear clustering trends for Humanity and Freedom at the top, and Scientific Temper and Inquisitiveness at the bottom, set the stage for understanding the specific value hierarchy that characterises students immersed in Tagore's educational ethos.

Table 1: Frequency Distribution of Value Rankings among Patha Bhavan Students (N=50)

Sl. No.	Value	01-03	04-06	07-09	10-12	13-15	16-18
01	Altruism	09	06	11	09	05	10
02	Confidence	17	19	06	04	03	01
03	Courage	04	14	12	10	05	05
04	Creativeness	03	14	16	09	05	03
05	Dedication	06	11	09	09	08	07
06	Equality	03	10	06	12	06	13
07	Fraternity	09	08	10	15	05	03
08	Freedom	20	05	12	05	02	06
09	Humanity	38	05	02	01	03	01
10	Innovativeness	01	05	11	14	12	07
11	Inquisitiveness	02	02	03	10	16	17
12	Integrity	03	09	11	07	13	07
13	Internationalism	02	09	05	07	19	08
14	Leadership	02	06	09	07	07	19
15	Logical	04	06	07	09	12	12
16	Patriotism	11	09	07	06	12	05
17	Scientific Temper	00	03	04	07	14	22
18	Truthfulness	16	10	09	07	03	05

The data reveal a **distinct value hierarchy** closely aligned with Tagore's emphasis on **humanism, freedom, and the holistic development of the individual**. The preeminent ranking of **Humanity** and the strong prioritisation of **Freedom** and **Confidence** are foundational pillars of Tagore's educational vision, underscoring the institution's success in cultivating compassionate, autonomous, and self-assured learners. This reflects Tagore's belief in education as a liberating force that nurtures the "whole human being" in harmony with nature and society. However, the relatively lower ranking of values such as **Innovativeness**, **Inquisitiveness**, and **Scientific Temper** invites deeper pedagogical reflection. These values, central to Tagore's ideals of creative expression, joyful inquiry, and rational engagement with the world, may not be as fully internalised, suggesting a potential gap between the philosophical emphasis on creativity and curiosity and their lived enactment in the learning environment. This points to opportunities for pedagogical refinement, particularly in how values associated with experimentation, critical questioning, and disciplined innovation are modelled, encouraged, and integrated into the daily educational experience at Patha Bhavan.

Graph 1: Rank Distribution against Reflected Values of PB Students

Median Ranks and Value Hierarchy

The computed median ranks crystallise this hierarchy into an unambiguous order. **Humanity** has the lowest median (2.50), confirming its premier status. It is followed by **Confidence** (Median: 5.00) and **Freedom** (Median: 5.50), which share the next highest positions.

At the other end of the spectrum, **Innovativeness** emerges with the highest median (9.50), marking it as the least emphasised value in this cohort. **Altruism** (Median: 9.00) also ranks very low. Values like **Dedication** and **Fraternity** (Median: 8.50) fall into the lower-moderate category.

Table 2: Rank Order of Values Based on Median Scores (Patha Bhavan)

Rank (Numerical)	Rank (Descriptive)	Value	Median	Interpretation
1	1	Humanity	2.50	Highest priority, strongly internalised
2	2	Confidence	5.00	Very high importance
3-4	3.5	Freedom	5.50	High importance
3-4	3.5	Scientific Temper	5.50	High importance
5	5	Inquisitiveness	6.50	Moderately high
6-7	6.5	Creativeness	7.00	Moderate importance
6-7	6.5	Leadership	7.00	Moderate importance
8-9	8.5	Courage	7.50	Moderate importance
8-9	8.5	Internationalism	7.50	Moderate importance
10-14	12	Equality	8.00	Moderate to low importance

10-14	12	Integrity	8.00	Moderate to low importance
10-14	12	Logical	8.00	Moderate to low importance
10-14	12	Patriotism	8.00	Moderate to low importance
10-14	12	Truthfulness	8.00	Moderate to low importance
15-16	15.5	Dedication	8.50	Lower moderate priority
15-16	15.5	Fraternity	8.50	Lower moderate priority
17	17	Altruism	9.00	Low priority
18	18	Innovativeness	9.50	Lowest priority

4 | DISCUSSION AND INTERPRETATION

4.1. Profound Internalisation of Tagore's Humanistic Core

The most significant finding is the pre-eminent ranking of **Humanity**. For Tagore, education was fundamentally a "human institution" for the cultivation of a universal human spirit. He believed in "the education of the heart," where empathy, compassion, and a sense of shared human dignity were paramount (Goswamee & Saikia, 2017). The fact that this value is so overwhelmingly internalised by Patha Bhavan students suggests the institution has successfully embodied and transmitted this cornerstone of Tagore's philosophy (Debbarma, 2015). The daily rhythms of Santiniketan, its community life, festivals, and emphasis on interpersonal harmony appear to have nurtured a deep-seated humanistic consciousness among learners.

4.2. Emphasis on Freedom and Confidence: The Liberated Individual

The high ranks of **Freedom** and **Confidence** resonate directly with Tagore's radical critique of rigid, oppressive schooling. He famously sought to liberate education from "the gloomy walls of the classroom" and the "tyranny of the book." Freedom, for him, was the essential climate for authentic growth, curiosity, and self-discovery (Datta, 2018). The high value placed on freedom by students indicates an educational environment that respects autonomy and choice. Closely linked is **Confidence**, which reflects the self-assuredness Tagore hoped to instil a belief in one's own capacities and voice, free from the fear of authority or failure (Mukherjee, 1962). This pairing suggests Patha Bhavan fosters the development of the self-reliant, confident individual Tagore envisioned.

4.3. The Paradox of Creativity and Inquiry

A more complex picture emerges with values like **Creativeness** and **Inquisitiveness**. While **Creativeness** holds a moderate rank (6.5), **Inquisitiveness** is surprisingly higher (5th), yet both are conceptually central to Tagore. He saw creativity and the joyful pursuit of knowledge as the essence of learning. The moderate positioning may indicate that students associate these more with specific artistic or academic domains rather than as pervasive life values (Quayum, 2022). The relatively higher rank of Inquisitiveness is encouraging, but its clustering in lower intervals by many students suggests that a spontaneous, questioning spirit may still be tempered by curricular structures or assessment patterns.

4.4. Moderate Stance on Universalism and Rationality

Internationalism, a value Tagore lived and breathed through Visva-Bharati ("where the world makes a home in a single nest"), holds a moderate position. This may reflect a nuanced understanding; students may embrace global consciousness but prioritise immediate human relationships (Humanity) over a broader abstract ideal (Gour, 2014). Similarly, **Scientific Temper** shares a high rank (3.5) with Freedom, which is intriguing. Tagore advocated for a reasoned, critical mind, welcoming science as part of a full human education. This ranking suggests an appreciation for rationality, though its practical application in day-to-day learning may vary.

4.5. Lower Priority for Community-Oriented and Perseverance Values

The lower rankings of **Fraternity**, **Altruism**, and **Dedication** present a critical area for reflection. Tagore deeply valued community (*Shanti-Niketan*, the abode of peace) and selfless service. The lower position of Fraternity and Altruism might suggest that the sense of universal humanity is stronger than the ethic of actionable brotherhood or self-sacrifice within the immediate community (Bradbury, 2019). The low rank of **Dedication** is particularly notable, as Tagore emphasised *sadhana*, dedicated, disciplined practice in both art and life. This could indicate a perception of dedication as external labour rather than an internalised value of committed pursuit, or it may reflect the challenge of sustaining disciplined practice within a philosophy heavily centred on freedom and natural growth (Das & Bera, 2020).

4.6. The Challenge of Innovativeness

The lowest rank of **Innovativeness** is perhaps the most significant point of divergence from Tagore's spirit. Tagore was a relentless innovator in pedagogy, institution-building, and artistic expression. He envisioned education as a creative, ever-renewing process (Mandal, 2013). This low ranking could point to a gap between inheriting a creative tradition and embodying a personal, disruptive, innovative spirit. It may suggest that the pedagogical environment, while rich in creative exposure, could further empower students to challenge, experiment, and redefine paradigms on their own terms.

4.7. Synthesis and Implications

The value hierarchy from Patha Bhavan reveals students who have deeply absorbed the **humanistic heart and liberating ethos** of Tagore's vision. The institution excels in fostering compassionate, confident, and freedom-loving individuals (Kumar, 2015). This is a profound achievement.

However, the relative deprioritisation of values like Innovativeness, Dedication, and active Fraternity suggests a potential imbalance (Hauck & Chowdury, 2025). Tagore's holistic ideal was not just freedom *from* constraint, but freedom *for* creative mastery, for dedicated service, for building loving communities (Gorden, 2022). It was a balance between the joy of discovery and the discipline of excellence; between individual flowering and collective responsibility.

This analysis highlights an opportunity for pedagogical evolution. To more fully realise Tagore's integrated vision, the learning culture could:

- More explicitly connect the value of Humanity to the practical ethics of Fraternity and Altruism through structured community engagement projects.
- Frame Dedication not as drudgery but as the passionate pursuit of mastery (*sadhana*) in chosen fields, be it music, painting, science, or literature.
- Create more spaces for student-led, open-ended projects that reward risk-taking and novel solutions, thereby strengthening the value of Innovativeness.
- Ensure that the spirit of Inquisitiveness and Scientific Temper permeates all disciplines, encouraging a "reasoned wonder" about the world.

5 | CONCLUSION

This empirical study sought to move beyond a theoretical appreciation of Rabindranath Tagore's educational philosophy and to assess its tangible reflection in the value systems of students at an institution he founded. The findings offer a nuanced and insightful picture.

On the one hand, they provide strong validation. The top-ranked values, such as **Humanity, Confidence, and Freedom**, are precisely the pillars of Tagore's "education for liberation." This indicates that Patha Bhavan has successfully created an ecosystem that nurtures empathetic, self-assured, and autonomous individuals, effectively translating its foundational ideology into a lived student ethos.

On the other hand, the value hierarchy reveals areas for conscious pedagogical reflection. The lower prioritisation of **Innovativeness**, **Dedication**, and communal values like **Fraternity** suggests that some dimensions of Tagore's rich vision may require more deliberate cultivation. Tagore's ideal was not a one-sided celebration of unrestrained freedom but a harmonious development of the complete person, creative yet disciplined, individual yet communal, locally rooted yet globally conscious.

Therefore, this study does not indicate a shortcoming but illuminates a pathway for growth. It underscores that the internalisation of a complex philosophical vision is an ongoing, dynamic process. For Patha Bhavan and similar value-based institutions, it calls for a continuous dialogue between the timeless ideals of their founders and the evolving practices of the present. It suggests the need for curricula and teaching methodologies that consciously foster the full spectrum of Tagorean virtues, balancing the heart's compassion with the hand's dedicated skill and the mind's innovative leap.

Ultimately, this research contributes to the broader discourse on value-based education by providing an empirical methodology and evidence-based insights. It affirms the powerful role of intentionally philosophy-grounded educational environments in shaping character. Simultaneously, it highlights that such translation is neither automatic nor complete, necessitating ongoing self-assessment and pedagogical innovation. Future research through longitudinal studies and comparative analysis across different Tagorean-inspired schools could further illuminate how to best cultivate the integrated, creative, and humane individuals Rabindranath Tagore believed were essential for a truly enlightened world.
