Abstract

The advent of information & technology has broken the barriers of national boundaries. Socio-economic statuses of societies are changing & also the work culture. The aim of taking up the responsibility of enabling the individuals to face the challenging situations is on education. Higher education bears the important position in preparing the technology-driven, value-driven, competent & skilled individuals. In the era of globalisation & modernisation higher education has to keep pace with the changing time. A new paradigm is evolving which consists of new trends in education system. Privatisation, distance education, collaborative education, franchising, branching campus & trans national education are the few concepts which are taking place of the traditional education system. This paper throws light on these concepts of higher education & their benefits for the development of technology & value-driven global citizens. Globalization has also created a society which is multicultural & multilingual & this in turn making the teaching-learning process more challenging. To face these challenges new trends in higher education are not enough there is a need of knowledge about Learning Styles. Knowledge of different learning styles would enable both the teachers & learners to cope with the demands of learners coming from multicultural backgrounds. This paper discusses about various learning styles which can be helpful in developing global talent & also about recent trends in higher education which would certainly provide more flexible opportunities to the learners across the world to come at one platform & learn.

Key Words: Higher Education, Globalisation, Privatisation, Franchising, Trans-national education, Learning Styles.

Introduction:

In the era of knowledge-driven economy and learning societies, both formal and informal education is playing an increasingly vital role in promoting economic solidarity, social cohesion, individual growth, sustainable development, and a culture of peace and world citizenship. Whereas our views about the way we live, learn, work, and 'think about work' have changed, the acquisition of knowledge and skills provided by a traditional formal educational setup do not correspond. Therefore, a new paradigm must evolve that is developmental, human-centred, environmentally sound, and all-inclusive, so as to prepare learners to be contributors to knowledge and not just mere recipients of knowledge. It has opened up new challenges and opportunities for higher education institutions – whether public, private, or hybrid.

In his address entitled, 'A matter of heart' delivered at the Peking University in 1990 Daisaku Ikeda, a leading peace philosopher said, "It is people who will pave the way toward the future of the world, & there is no greater influence in the development of an individual than that of solid, human-centred education. Learning is the fundamental force that builds society &
